## Background

The long-term excellence of Johns Hopkins continues to depend on a vibrant academic environment that includes and supports diverse people, experiences, and thought. Our faculty stand at the core of this environment and thus the recruitment, retention, and advancement of individuals from diverse backgrounds is key to this priority.

The university published its first Report on Faculty Composition in 2016 based on data from the November 2015 census conducted by the Office of Institutional Research (OIR). That report presented a clear baseline for gender, minority, and underrepresented minority (URM) representation at the divisional and departmental levels. The next faculty report, published in spring 2019, was based on a November 2017 faculty census. This 2020 update summarizes data from the November 2019 faculty census, which was also conducted by OIR and validated by all divisions. It examines the progress we have made since the 2015 census driven by funding and support for focused diversity initiatives at each of the university's divisions. The opportunity to compare the 2019 and 2015 censuses and examine four-year trends helps smooth out some of the short-term variations that inevitably enter into comparisons made over shorter durations.

Faculty diversity is a cornerstone of the university's Roadmap on Diversity and Inclusion. This biennial report underscores the Roadmap's themes of transparency and accountability to our university community for the work we are doing in this area. We firmly believe that this kind of detailed data will advance our efforts to measure our progress in faculty diversity over time, better assess our opportunities for growth, and be more strategic about faculty recruitment and retention.

## Executive Summary

The university's Faculty Diversity Initiative (FDI) was launched in November 2015. A guiding principle of the FDI and the university's Roadmap on Diversity and Inclusion, published in November 2016, is a commitment to monitor and report publicly on the university's progress on diversity. As Johns Hopkins enters the fifth and final year of this first iteration of the FDI, this report helps us take stock of the progress made by providing data from the 2019 faculty census and offering comparisons to the 2015 and 2017 censuses.

From the data presented in this report it is clear that, through the life of the initiative, important gains have been made. During a period of faculty growth—14\% growth in professorial faculty and $11 \%$ growth overall since fall 2015-female and underrepresented minority (URM) faculty representation grew faster, reducing historical imbalances in those two areas of faculty diversity. In particular, the proportions of female, Black, Hispanic, minority, and URM faculty increased over that time period. This increase in faculty diversity occurred in seven of Hopkins' nine academic divisions.

Other findings, detailed in this report, include the following:

- From 2015 to 2019, female representation among the faculty increased from $42 \%$ to $45 \%$ and URM representation increased from $8 \%$ to $10 \%$ (see Table 3).
- Across multiple divisions, JHU has seen improvements in underrepresented minority (URM) faculty representation, female faculty representation, and transparency in reporting from departments that have few or no URM faculty (see Figures D and E; Tables 8a and 8b).
- Gains in URM representation from 2015 to 2019 are similar among professorial and non-professorial faculty (see Figure B; Tables 3 and 4).
- Hopkins's faculty diversity compares favorably to that of its Ivy Plus peers, all of which have their own robust faculty diversity initiatives and vie for similar candidates from the available pipelines and pools (see Table 5a).
- The adoption of systems and tools to measure and track faculty diversity, and the accompanying managerial and cultural changes in the divisions, have led to these recent successes and have the promise to be enduring.

## Faculty Diversity: Divisional and Departmental Data, Fall 2019 and Historical

Throughout this report, references will be made to counts and percentages that are available, in tabular and chart form, in the Tables and Charts section. In particular:

- The Notes presented with the tables are necessary for interpretation of the presented data.
- Table 1 is a November 2019 snapshot of faculty composition by division. It includes all faculty, with full-time professorial faculty categorized by rank. Every faculty member is counted in one racial/ethnic category, per self-identification in the university's HR system and the precedence rule described in Note 5.
- Table 2 is also a November 2019 snapshot. It starts with the professorial faculty population of Table 1 and shows how they are distributed among the departments of the four divisions that have departments. Also, the data are grouped by sub-division in Arts \& Sciences (Natural Sciences, Social Sciences and Humanities) and in Medicine (Basic Sciences and Clinical Sciences).
- Table 3 is similar in population and layout to Table 1 except that it provides trend data from three censuses on female, minority, and underrepresented minority proportions among all faculty.
- Table 4 is similar in layout to Table 2. It excludes Peabody and provides trend data from three censuses on female, minority, and underrepresented minority professorial faculty.
- Tables $\mathbf{5 - 8 b}$, based on faculty census data, present analyses that illustrate specific issues highlighted in this report.
- Charts 1-4 present gender and URM information from Tables 1 and 2 in a way that facilitates divisional comparisons.
- Charts 5-8 extend the divisional comparisons by including information from previous FCRs and allowing both longitudinal and divisional comparisons.

In fall 2019, for the first time, the Peabody Institute created professorial ranks among its full-time conservatory faculty. This history and recent change are reflected in Table 3 where there are no 2015 or 2017 data for Peabody by professorial rank, but 2019 professorial data are available. For the same reason, Peabody is excluded from Table 4. Accordingly, in this report, discussion of professorial faculty trends will exclude Peabody.

Additionally, before assessing faculty composition as of fall 2019 and changes since fall 2015, it is worth noting that our nine academic divisions vary widely in size of faculty. As a result, the effect of a particular change on demographic proportions-for example, hiring one more female faculty member—varies a great deal too. The division with the smallest faculty population is the School of Nursing with 100 faculty, of whom 75 are professorial; the division with the largest is the School of Medicine, with 2,954 faculty, of whom 2,320 are professorial. Nursing faculty comprise about 2\% of the university's faculty, and Medicine's about 57\%. Accordingly, a percent improvement of any metric in Medicine is harder to achieve or sustain and has a bigger impact on overall university metrics.

## FEMALE REPRESENTATION

An available benchmark for the purposes of institutional comparison is the faculty diversity among our Ivy Plus peers, as gleaned from publicly available sources. Table 5a shows that, based on a fall 2018 common data source comparing the Ivy Plus, our proportion of women among full-time instructional faculty, $43 \%$, is second only to Columbia University's, 44\%.

Taking a longitudinal view, at Johns Hopkins, female representation has increased between 2015 and 2019, both among all full-time faculty ( $42 \%$ to $45 \%$ ) and also among professorial full-time faculty ( $37 \%$ to $41 \%$ )(see Charts 6 and 7 and Figure A below). As with all diversity metrics, there is substantial divisional variation around this overall upward trend.

Figure A: Female Representation Among Faculty

| University | Full-time Faculty |  |  | Full-time Professorial Faculty |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | All | Female |  | All | Female |  |
|  | N | N | $\%$ | N | N | $\%$ |
| Fall 2015 | 4,663 | 1,957 | 42 | 3,022 | 1,130 | 37 |
| Fall 2017 | 4,887 | 2,160 | 44 | 3,186 | 1,278 | 40 |
| Fall 2019 | 5,180 | 2,339 | 45 | 3,380 | 1,392 | 41 |

Note: Peabody excluded in all temporal comparisons related to Professorial Faculty.

This figure shows an improvement in female representation, but requires additional context. In particular, the following questions arise: What is the equilibrium mix we are aiming for? And how are female-majority divisions or departments to be viewed? Tables 5a-5c provide a few benchmarks to inform this discussion. Table 5a, based on fall 2018 data reported in IPEDS on the composition of instructional faculty among Ivy Plus peers, shows a female representation range from $27 \%$ to $44 \%$, with JHU at $43 \%$ female. Table 5 b, based on IPEDS 2017-18 data, focuses on the pipeline to faculty positions-i.e., doctoral degree completions-and shows that 47\% of doctorates awarded at AAU institutions that year were awarded to women. On the other hand, Table 5 c , sourced from the AAU data exchanges, points to a female professorial representation of about $28 \%$. (As intuition would suggest, all of these data, when further analyzed, show substantial variation in female representation based on field or discipline.) Triangulating among these different benchmarks and factoring in JHU's vision to be a leader on these dimensions, we take the view that a $45 \%$ to $55 \%$ band provides a reasonably narrow but flexible goal for gender mix.

## Female Representation Among All Faculty

At the university, there has been a steady increase in the proportion of female faculty, from $42 \%$ in 2015 , to $44 \%$ in 2017 , to $45 \%$ in 2019 . This pattern of steady increase is also reflected in the percentage of females in each of those years within four divisions in particular: The Krieger School of Arts and Sciences (38\% to 41\% to 42\%), SAIS (27\% to $31 \%$ to $33 \%$ ), Medicine ( $40 \%$ to $42 \%$ to $43 \%$ ), and Peabody ( $35 \%$ to $37 \%$ to $38 \%$ ). (See Chart 5 .)

In three divisions, the majority of faculty are women: Nursing (88\%), the School of Education (72\%), and the Bloomberg School of Public Health (60\%). A continuing decline since 2015 in the proportion of female faculty in Nursing ( $94 \%$ to $93 \%$ to $88 \%$ ) reflects its intentional diversity efforts focused on the recruitment and hiring of male faculty. At Education, the high proportion of women faculty is now back to its 2015 level ( $72 \%$ to $78 \%$ to $72 \%$ ) and at Public Health, the proportion has continued to increase ( $57 \%$ to $58 \%$ to $60 \%$ ).

Public Health, Education, and SAIS are three divisions where the faculties are more than $50 \%$ non-professorial. Based on the data in Table 1, Public Health has a total of 768 faculty, of whom $346(45 \%)$ are professorial and 418 (54\%) are full-time but hold non-professorial titles. In Education, there are 122 faculty, of whom 59 (48\%) are professorial and $62(51 \%)$ are full-time other rank. And in SAIS, there are 107 faculty, of whom 47 ( $44 \%$ ) are professorial and 59 (55\%) are full-time other rank. Accordingly, overall faculty composition in these divisions is weighted towards the non-professorial faculty composition.

At the Whiting School of Engineering, the 2019 proportion of female faculty saw a substantial increase from 2015 to 2017 and then remained flat in 2019 (19\% to $26 \%$ to $26 \%$ ). And, at the Carey Business School, the proportion has declined to marginally below the 2015 level ( $32 \%$ to $34 \%$ to $31 \%$ ).

## Female Representation Among Professorial Faculty

The 2019 census data indicates a continuing uptick in the proportion of women among the university's professorial faculty: $37 \%$ in 2015 , $40 \%$ in 2017 , and $41 \%$ in 2019. (See Chart 7.)

In Arts and Sciences, overall, the proportion of female professorial faculty has increased from 31\% in 2015 to $32 \%$ in 2017 to $33 \%$ in 2019 (see Table 4). This is reflected in steady increases for the same years in Natural Sciences ( $25 \%$ to $26 \%$ to $27 \%$ ) and Humanities ( $37 \%$ to $38 \%$ to $40 \%$ ), which help offset a slight dampening in the Social Sciences ( $32 \%$ to $34 \%$ to $33 \%$ ) as seen in Chart 7. In the Natural Sciences, with every department having 10 or more professorial faculty in 2019, the Biology department and the Earth and Planetary Sciences department have made the most substantial strides, both increasing the number of professorial faculty and also the proportion of professorial women. In the Humanities, five of 10 departments have 10 or more professorial faculty in 2019; among them, English and History have made meaningful strides, increasing both the number of professorial faculty and also the proportion of professorial women. Among the Social Sciences departments, the Political Science department displays the same dual-positive trend since 2015 on professorial faculty and female professorial faculty.

Paralleling the increase in their female faculty overall, SAIS and Medicine saw an increase in their female professorial faculty: SAIS from $17 \%$ to $26 \%$ to $28 \%$ and Medicine from $37 \%$ to $40 \%$ to $41 \%$. At SAIS, despite an almost flat professorial count since 2015, the proportion of female professorial faculty has risen from $17 \%$ to $28 \%$. This indicates that replacement hiring has tilted towards reducing the gender imbalance. In Medicine, the overall uptrend is reflected both in the Basic Sciences and in the Clinical Sciences.

Of the divisions where there is a female majority among all faculty, Nursing and Education also have a female majority among the professorial faculty. In those schools, the female professorial faculty trends mirror the female faculty trends: a steady decline in Nursing ( $94 \%$ to $89 \%$ to $88 \%$ ) and in Education ( $69 \%$ to $67 \%$ to 63\%). At Public Health, the proportion of professorial female faculty has ticked upward to almost equal representation ( $43 \%$ to $47 \%$ to $49 \%$ ) and is now in the $45 \%-55 \%$ band.

At Engineering, the proportion of female professorial faculty continued to increase, albeit from a small base (16\% to $20 \%$ to $21 \%$ ). And, at the Carey Business School, the proportion reverted to the 2015 level ( $30 \%$ to $33 \%$ to $30 \%$ ).

## Departmental Progress in Female Professorial Faculty Representation

Table 6 lists departments that have at least 10 professorial faculty and whose percentage of female professorial faculty is more than the university average of $41 \%$. Most of those departments' percentages of female professorial faculty are also $60 \%$ or less, except for three in Medicine (Gynecology and Obstetrics, Pediatrics, and Physical Medicine and Rehabilitation) and two in Public Health (Health, Behavior, and Society and Population, Family, and Reproductive Health), where the proportions range between $64 \%$ and $80 \%$.

Among the divisions that have departmental structures, in fall 2019 every department had female professorial faculty (see Table 4). The lowest proportions are 6\% in each of Engineering's Applied Math \& Sciences (AMS) and Computer Science departments and 7\% in Materials Science and Engineering. All three also have seen their proportions drop since 2015. Another department with a single-digit female professorial proportion is Chemistry, which has lost representation in this demographic when looking at 2015, 2017, and 2019 ( $16 \%$ to $10 \%$ to $9 \%$ ).

Focusing further on STEM fields, where hiring and retention challenges tend to be the greatest, Natural Sciences overall displays a slight increase over the four-year period ( $25 \%$ to $26 \%$ to $27 \%$ ) with growth over four years in Biology ( $25 \%$ to $27 \%$ to $31 \%$ ), Earth and Planetary Sciences ( $18 \%$ to $36 \%$ to $40 \%$ ), and Physics \& Astronomy ( $8 \%$ to $14 \%$ to $12 \%$ ), and all three departments also increasing their counts of professorial faculty over the same period. In Engineering overall ( $16 \%$ to $20 \%$ to $21 \%$ ), growth is seen in departments other than AMS, Computer Science, and Mechanical Engineering. In Medicine's Basic Sciences, among departments with at least 10 faculty, Biophysics and Biophysical Chemistry dropped on this metric ( $30 \%$ to $30 \%$ to $20 \%$ ) , as did Cell Biology ( $54 \%$ to $50 \%$ to $47 \%$ ) and, marginally, Neuroscience ( $26 \%$ to $25 \%$ to $24 \%$ ). All of Medicine's Clinical Sciences departments have at least 10 professorial faculty and most show gains in professorial female representation since 2015, with the exception of the female-dominated field of Gynecology \& Obstetrics ( $82 \%$ to $78 \%$ to $77 \%$ ) and a marginal reduction in Radiation Oncology ( $40 \%$ to $38 \%$ to $39 \%$ ). In Public Health, all of the departments saw an increase since 2015.

## MINORITY AND UNDERREPRESENTED MINORITY (URM) REPRESENTATION

Using standard IPEDS definitions, the URM group is composed of individuals who self-identify as Black or African American, Hispanic, American Indian, Hawaiian or other Pacific Islanders. The minority group is composed of individuals who self-identify either as one of the URMs or as Asian.

First, Table 5a indicates that among our Ivy Plus peers, and based on a common fall 2018 data source, our 9\% proportion of URM among full-time instructional faculty matches that of Columbia University and Dartmouth College and is second only to $10 \%$ at Brown University.

Next, we consider our progress as a university between the fall 2015 and the fall 2019 census. (See Figure B below.) There is positive news: Despite an $11 \%$ growth in the size of the faculty between 2015 and 2019 and an almost 12\% growth in the professorial faculty at the university, proportions of Black faculty, Hispanic faculty, minorities and URMs have generally increased over the four-year period. However, the proportions of Black and Hispanic faculty (who comprise the major portion of the URM category) have remained relatively small, in the $3 \%$ to $6 \%$ range.

Figure B: Minority and URM Representation Among Faculty

| Full-time Faculty: University |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | All | Hispanic |  | Black |  | Minority |  | URM |  |  |  |  |  |
|  | N | N | $\%$ | N | $\%$ | N | $\%$ | N | $\%$ |  |  |  |  |
| Fall 2015 | 4,663 | 166 | 4 | 186 | 4 | 1,389 | 30 | 372 | 8 |  |  |  |  |
| Fall 2017 | 4,887 | 169 | 3 | 238 | 5 | 1,555 | 32 | 425 | 9 |  |  |  |  |
| Fall 2019 | 5,180 | 199 | 4 | 300 | 6 | 1,764 | 34 | 534 | 10 |  |  |  |  |

| Full-time Professorial Faculty: University |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | All | Hispanic |  | Black |  | Minority |  | URM |  |  |  |  |  |
|  | N | N | $\%$ | N | $\%$ | N | $\%$ | N | $\%$ |  |  |  |  |
| Fall 2015 | 3,022 | 106 | 4 | 124 | 4 | 831 | 27 | 236 | 8 |  |  |  |  |
| Fall 2017 | 3,186 | 116 | 4 | 159 | 5 | 956 | 30 | 286 | 9 |  |  |  |  |
| Fall 2019 | 3,380 | 127 | 4 | 187 | 6 | 1,068 | 32 | 333 | 10 |  |  |  |  |

Note: Peabody excluded in all temporal comparisons related to Professorial Faculty.

## Minority and Underrepresented Minority (URM) Faculty

Overall, the proportion of faculty that self-identified as being members of minority racial and ethnic groups increased from $30 \%$ in 2015 , to $32 \%$ in 2017 , to $34 \%$ in 2019 (see Table 3). Increases in minority representation since 2015 are noted in all divisions except Business. Nursing has the most notable increase in minority faculty proportion ( $16 \%$ in 2015 to $23 \%$ in 2019). Medicine made the biggest contribution to the university's increase on this dimension: It has almost $60 \%$ of the university's faculty and its faculty grew by almost $7 \%$ over the period. Even so, its minority proportion increased from $35 \%$ to $38 \%$.

As of fall 2019, individuals who identify as Asian, and are therefore part of the minority group, comprise $24 \%$ of all faculty at the university (see Table 1). Divisions that report a similar or higher proportion of Asian faculty than the university average are: Business (39\%), Medicine (28\%) and Engineering (24\%), with the most influential contribution from Medicine due to the relatively large size of its faculty.

Overall, $10 \%$ of faculty reported being members of a URM (see Chart 3). This is up from $8 \%$ in 2015 (see Chart 6) and represents a net increase of 162 URM faculty members, even after retirements and departures during the four-year period have been accounted for. Increases in URM faculty representation since 2015 are noted in all divisions except Business. Once again, Nursing has the most notable increase in URM faculty proportion ( $10 \%$ in 2015 to $23 \%$ in 2019). Education's URM faculty proportion rose from $12 \%$ in 2015 to $19 \%$ in 2019 and at Public Health, it increased from $9 \%$ to $13 \%$. While SAIS and Medicine show a URM increase, it is marginal, about $1 \%$ in each division over four years.

Taking a look at the largest racial or ethnic groups among URMs, faculty identifying as Black or African American comprise $6 \%$ of the university (see Table 1). Divisions that have higher proportions of this demographic group are Education (16\%), Nursing (16\%), Peabody (11\%) and Public Health (8\%). At the other five divisions, this proportion ranges from $1 \%$ at SAIS to $6 \%$ at Business.

Faculty identifying as Hispanic comprise 4\% of the university. Divisions that have higher proportions of this demographic group are Public Health (8\%), SAIS (6\%), Arts and Sciences (5\%), and Nursing (5\%). At the other five divisions, the proportion of Hispanic faculty is $2 \%$ at Peabody and at Education, $3 \%$ at Business, and $4 \%$ at Engineering and at Medicine.

## Minority and Underrepresented Minority (URM) Professorial Faculty

Overall, the proportion of professorial faculty that self-identified as being members of minority racial and ethnic groups increased from $27 \%$ in 2015 to $30 \%$ in 2017 to $32 \%$ in 2019 (see Table 4). Increases in minority professorial faculty representation since 2015 are noted in all divisions except Business (where it still remains over $50 \%$ ). Nursing has the most notable increase in minority professorial faculty proportion (19\% in 2015 to $33 \%$ in 2019). Medicine made the biggest contribution to the university's increase on this dimension: It has over 67\% of the university's professorial faculty and its professorial faculty grew by more than $11 \%$ over the period. Even so, its minority proportion increased from $30 \%$ to $34 \%$.

As of fall 2019, faculty identifying as Asian, who are part of the minority group, make up $22 \%$ of all professorial faculty at the university (see Table 2). Divisions that report a similar or higher proportion of professorial Asian faculty than the university average are: Business (41\%), Medicine (24\%) and Engineering (23\%), with the most prominent contribution from Medicine, due to the relatively large size of its faculty.

Overall, $10 \%$ of professorial faculty reported being members of a URM in 2019, similar to the URM representation among all faculty. This is up from $8 \%$ in 2015 (see Chart 8) and represents a net increase of 99 URM professorial faculty members, after accounting for retirements and departures during the four-year period. Increases in URM representation since 2015 among professorial faculty are noted in all divisions except Business. Nursing has seen a notable increase in URM professorial faculty proportion from $13 \%$ in 2015 to $21 \%$ in 2019. Public Health's URM professorial faculty proportion rose from 9\% in 2015 to 13\% in 2019.

Professorial faculty identifying as Black or African American, which is the largest racial and ethnic group among URMs, make up 6\% of faculty at the university (see Table 2). Divisions that have higher proportions of this demographic group are Business (7\%), Education (15\%), Nursing (15\%), Peabody (10\%) and Public Health (8\%). At the other four divisions, this proportion ranges from none at SAIS to 5\% at Medicine.

Professorial faculty identifying as Hispanic comprise $4 \%$ of faculty at the university, and among the divisions, there is little variation on this metric. Only Nursing, with $5 \%$ Hispanic professorial faculty, has a higher proportion of this demographic group. Arts and Sciences, Engineering, SAIS, Medicine, and Public Health have $4 \%$ and Business, Education and Peabody each have slightly less than $4 \%$ Hispanic professorial faculty.

## Departmental Progress in URM Professorial Faculty Representation

In Table 7, we highlight the 20 departments that have at least 10 professorial faculty each and whose URM professorial proportions in fall 2019 exceed the JHU average of $10 \%$. The fall 2017 census had the same number of departments meeting that criteria, so, while five on the fall 2017 list have dropped out, five departments have also entered the count in 2019. They are Economics and Political Science in Arts and Sciences, Biomedical Engineering in Engineering, and Molecular and Comparative Pathobiology and the department of Medicine in Medicine. Note that Business, Education, and SAIS do not have departmental structures and Peabody has 16
small departments that are consolidated for the purposes of this report. Their professorial URM proportions are $10 \%$ at Business, $17 \%$ at Education $17 \%, 6 \%$ at SAIS, and $13 \%$ at Peabody.

As of fall 2019, four divisions have among them 11 departments that, despite having 10 or more professorial faculty each, do not have any professorial faculty who self-identify as URMs (see Table 8a), and 10 of those 11 are STEM departments. However, looking back at recent history, only five of that set of 11 have not had URM professorial faculty in any of the last three faculty censuses of 2015, 2017, and 2019 (see Table 8b). Keeping in mind that the hiring of professorial faculty occurs episodically, Table 8 b also provides the number of professorial new hires in those five departments between January 2016 and November 2019.

While the Earth and Planetary Sciences department at Arts and Sciences hired seven professorial faculty and the Chemical and Biomolecular Engineering department at Engineering hired six in that period, none of those were URM. The other three departments hired three or fewer professorial faculty during that time, and had more limited opportunities to increase their URM proportions among professorial faculty. One additional note about the 18 new hires in Table 8b: While the focus of this section is on URM representation, there were nine women among that set: five in Earth and Planetary Sciences and four in Chemical and Biomolecular Engineering, accounting for much of the solid growth in female representation in those departments.

## DIVERSITY AMONG PROFESSORIAL FACULTY IN ACADEMIC LEADERSHIP

Professorial faculty are called upon to serve in a variety of academic leadership roles in their departments or divisions, or at the university level. A diversity of experiences and viewpoints among the academic leadership group can be a driving force in our aspirations to be a welcoming and inclusive institution for diverse faculty, students, and staff.

Figure C below shows that, as of the November 2019 census, there are 113 professorial faculty serving in senior leadership positions of president, provost, vice-provost, dean, vice dean and department chair (or 'department director' in Medicine). Of this group, 34 are women (30\%), 22 are minority ( $19 \%$ ) and 12 are URM ( $11 \%$ ).

Figure C: Academic Leadership: Professorial Faculty Composition

|  | Total | Female | American <br> Indian | Asian | Black | Hispanic | Native <br> Hawaiian | White | URM |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| President/Provost | 2 |  |  | 1 |  |  |  | 1 |  |
| Vice Provosts | 6 | 2 |  |  |  |  |  | 6 |  |
| Deans | 9 | 3 |  |  | 1 |  |  | 8 | 1 |
| Vice Deans | 24 | 8 |  | 1 |  | 1 |  | 22 | 1 |
| Chairs | 72 | 21 |  | 8 | 4 | 6 |  | 54 | 10 |
| Grand Total | 113 | 34 |  | 10 | 5 | 7 |  | 91 | 12 |

## Notes:

1. SOM does not have "chairs"; department heads are "directors."
2. The following divisions do not have chairs or chair-equivalent positions: CBS, SAIS, SOE, SON.
3. Numbers reflect composition as of 11/1/2019.
4. Staff members who do not hold faculty positions also serve in academic leadership positions and including them would result in female proportion of $31 \%$; and Minority $19 \%$; and URM $10 \%$.

So, while the proportion of female representation among this group (30\%) falls outside of our target 45\%-55\% band, it exceeds $26 \%$, the proportion of female full professors at the university as a whole (see Table 1). The latter is a relevant benchmark since, generally, tenured full professors serve in these leadership positions.

The terms for leadership positions typically range from three to five years and, in practice, are often reviewed and renewed for multiple terms. Continuity and stability in leadership benefits the university in many ways and, indeed, is essential to the implementation and ongoing support of long-term diversity initiatives and plans. Therefore, an increase in diversity among the university leadership will necessarily be incremental in the short-to-medium term, with noticeable change occurring as leadership positions come open and qualified and diverse candidates are identified and nominated to fill them.

## Moving Forward

The goals of the Faculty Diversity Initiative, as laid out in the initial FDI progress report, are:

1. We will make progress in increasing diversity among faculty ranks universitywide
2. Faculty hiring and retention rates will better reflect the composition of the availability pools of exceptional and diverse faculty in all fields
3. Faculty members will report a strong sense of belonging and that JHU's climate is welcoming and engaging regardless of their background
4. The university will monitor and report on its progress in meeting its diversity goals

As we look ahead to the next Faculty Diversity Initiative, we take stock of the momentum we have built from the current Initiative and the gaps now brought to our attention as a result of regular monitoring, measurement, and temporal comparisons.

## GOALS FOR MEASURING AND INCREASING DIVERSITY

As we committed in our last faculty composition report, we continue to track our growth rates for women and URM faculty relative to overall faculty growth rates, and on this dimension, our census-to-census gains are sustained over the span of the current initiative.

Figure D below shows that, during a period when the university's faculty grew by 11\% (from fall 2015 to fall 2019), female faculty grew by $20 \%$ and URM faculty grew by $44 \%$, thereby reducing historical imbalances in those two areas of diversity among the faculty. Also, as indicated by the double starred rows, the same effect is observed in seven of Hopkins' nine academic divisions, including its largest division, Medicine. And, in Nursing, the slower increase in female faculty served to appropriately reduce their overrepresentation in that division. Nursing has also achieved impressive gains in URM faculty proportions, more than tripling URM faculty counts.

Figure D: Faculty Composition by Division

|  | All Faculty |  |  |  | Female Faculty |  |  |  | URM Faculty |  |  |  |

| Arts \& Sciences | 566 | 545 | 616 | 9 | 215 | 224 | 257 | 20 | 36 | 37 | 55 | 53 |
| Business | 75 | 95 | 109 | 45 | 24 | 32 | 34 | 42 | 9 | 12 | 10 | 11 |
| Education | 75 | 107 | 122 | 63 | 54 | 83 | 88 | 63 | 9 | 19 | 23 | 156 |
| Engineering | 272 | 391 | 397 | 46 | 51 | 100 | 104 | 104 | 13 | 22 | 33 | 154 |
| SAIS | 99 | 112 | 107 | 8 | 27 | 35 | 35 | 30 | 6 | 8 | 8 | 33 |
| Medicine | 2,761 | 2,861 | 2,954 | 7 | 1,114 | 1,200 | 1,268 | 14 | 226 | 235 | 276 | 22 |
| Nursing | 67 | 83 | 100 | 49 | 63 | 77 | 88 | 40 | 7 | 15 | 23 | 229 |
| Peabody | 160 | 156 | 185 | 16 | 56 | 57 | 70 | 25 | 9 | 10 | 25 | 178 |
| Public Health | 633 | 706 | 768 | 21 | 359 | 408 | 458 | 28 | 58 | 78 | 103 | 78 |
| University | 4,663 | 4,887 | 5,180 | 11 | 1,957 | 2,160 | 2,339 | 20 | 372 | 425 | 534 | 44 |

[^0]Additionally, some of the major trends in overall faculty diversity growth hold true even if we narrow the focus to professorial faculty, as Figure E below shows. The university's professorial faculty grew by 14\%, from fall 2015 to fall 2019 , and over the same period, female faculty grew by $25 \%$ and URM faculty grew by $43 \%$, so the profile of our professorial faculty continues to bend towards greater diversity. Excluding Peabody from this analysis because it did not have professorial ranks until 2019, six of our remaining eight divisions display the same improving trend on both dimensions of diversity. And Nursing has brought faculty gender composition more into balance over these reporting periods by increasing its male professorial proportion substantially.

Figure E: Professorial Faculty Composition by Division

| Division | Professorial Faculty |  |  |  | Female Professorial Faculty |  |  |  | URM Professorial Faculty |  |  |  |

| Nursing | 47 | 56 | 75 | 60 | 44 | 50 | 66 | 50 | 6 | 10 | 16 | 167 |
| Public Health | 309 | 339 | 346 | 12 | 132 | 158 | 169 | 28 | 29 | 37 | 45 | 55 |
| University | 3,022 | 3,186 | 3,380 | 12 | 1,130 | 1,278 | 1,392 | 23 | 236 | 286 | 333 | 41 |

Note: Peabody excluded from temporal comparisons related to Professorial Faculty.

* Division's gain in either proportion of female professorial faculty or proportion of URM professorial faculty outpaces percentage increase in professorial faculty 2015-19.
** Division's gains in proportion of female professorial faculty and proportion of URM professorial faculty outpace percentage increase in professorial faculty 2015-19.

It is clear that JHU has seen a positive impact on the composition of faculty at the professorial and nonprofessorial levels, owing in part to systemic adjustments regarding hiring practices.

This report and the two released previously fulfill an important goal of the Faculty Diversity Initiative. Throughout the life of the initiative, JHU has seen improvements in URM representation, female representation, and transparency around reporting on divisions that have few, or no, URM faculty.

Additionally, with the aim of enhancing our understanding not only from the counts and percentages, but also from faculty sentiment, JHU partnered with the FutureWork Institute to administer a survey to departed URM faculty and to conduct a focus group with junior faculty members from Medicine, Nursing and Public Health to gain insight into the experiences of URM faculty in the context of culture and climate. Also, JHU engaged the COACHE survey to gain information specifically about climate. Combining both of these mechanisms, we have identified areas that call for our renewed commitment: increasing opportunities for advancement, improving the climate around diversity and inclusion, and creating more effective work-life balance.

In response, and as first steps in addressing culture and environment, all divisions have plans that specifically focus on diversity in faculty hiring and most have dedicated assistant deans for diversity and inclusion. Strategies included in the divisional diversity plans range from diversity advocates on hiring committees and unconscious
bias training for all search committee members to completion of a final search activities summary/report for all faculty searches.

Reporting as we are in the midst of an unprecedented worldwide crisis, new realities await us on all fronts. However, our university is also excited to welcome a new chief diversity officer this summer who will work with the provost to create a vision that includes shaping and shepherding the next FDI against this backdrop. The hard work that lies ahead will build on the focused efforts made during the initial FDI: funding for diversity and inclusion officers; training for faculty search committees in the divisions; specific accountability for casting wide searches; and inviting a diverse and representative pool, aided by investment in and use of a faculty search portal.

The fundamentals are in place and we have to continue to build on the momentum, believing as we do that a diverse and inclusive professoriate is the backbone of a world-class institution for learning and research.

## Tables and Charts

## Notes:

1. Faculty data from November 1, 2019 OIR HR Census; includes deans and executives with faculty appointments.
2. Only faculty on JHU SAP payroll with status of "Active", "LOA with Pay", or "LOA without Pay" as of Nov 1, 2019 are counted in the census.
3. $\mathrm{FT}=$ full-time; $\mathrm{PT}=$ part-time; $\mathrm{ADJ}=$ adjunct (Only for Peabody Conservatory, no other casual/limited faculty are included).
4. Bloomberg Distinguished Professors (BDPs and BDAPs), Biomedical Engineering faculty, and Environmental Health and Engineering faculty are included in multiple divisional counts but are unduplicated in divisional subtotals and university totals.
5. Faculty who indicated more than one racial/ethnic identity in the JHU personnel system are categorized using the following precedence rule: Hispanic/Latino > Native Hawaiian or Other Pacific Islander > American Indian or Alaska Native > Black or African American > Asian > White.
6. URM or "underrepresented minority" faculty include those who identify as Hispanic/Latino, Black or African American, American Indian or Alaska Native, Native Hawaiian or Other Pacific Islander; the "minority" category includes those who identify as Asian and URMs.
7. All faculty members, irrespective of visa status, have the option of indicating one or more racial/ethnic identities in the JHU personnel system. Based on the information in the system, non-resident alien faculty members have been categorized and counted in exactly the same way as those who are US citizens or US permanent residents.

| Median among Ivy Plus | $\mathbf{3 7}$ | $\boldsymbol{8}$ |

Notes:

1. Peer data is from the Integrated Postsecondary Education Data System (IPEDS).
2. Full-time Instructional staff, as defined by IPEDS, comprises staff who are either (a) primarily instruction or (b) instruction combined with research and public service.
3. Research staff excluded.
